

Math 309 - Spring-Summer 2018

Problem Set # 3

Question 1.

Verify that the function

$$f(z) = 3x + y + i(3y - x)$$

is entire.

Question 2.

Verify that the function

$$f(z) = e^{-y} \sin x - i e^{-y} \cos x$$

is entire.

Question 3.

For the function

$$f(z) = \frac{z^2 + 1}{(z + 2)(z^2 + 2z + 2)},$$

determine the singular points of the function and state why the function is analytic everywhere except at those points.

Ans: $z = -2, -1 \pm i$.

Question 4.

Verify that the function

$$g(z) = \ln r + i\theta \quad (r > 0, 0 < \theta < 2\pi)$$

is analytic in the indicated domain of definition, with derivative $g'(z) = \frac{1}{z}$. Then show that the composite function $G(z) = g(z^2 + 1)$ is analytic in the quadrant $x > 0, y > 0$, with derivative

$$G'(z) = \frac{2z}{z^2 + 1}.$$

Suggestion: Observe that $\text{Im}(z^2 + 1) > 0$ when $x > 0, y > 0$.

Question 5.

Let $f(z)$ be analytic in a domain D . Prove that $f(z)$ must be constant throughout D if $|f(z)|$ is constant throughout D .

Suggestion: Observe that

$$\overline{f(z)} = \frac{c^2}{f(z)} \quad \text{if } |f(z)| = c \ (c \neq 0).$$

Question 6.

Show that the function

$$u(x, y) = \sinh x \sin y$$

is harmonic in some domain and find a harmonic conjugate $v(x, y)$.

Ans: $v(x, y) = -\cosh x \cos y$.

Question 7.

Verify that the function $u(r, \theta) = \ln r$ is harmonic in the domain $r > 0$, $0 < \theta < 2\pi$ by showing that it satisfies the polar form of Laplace's equation. Then use the Cauchy-Riemann equations in polar form, to derive the harmonic conjugate $v(r, \theta) = \theta$.

Question 8.

Show that

$$(a) \exp(2 \pm 3\pi i) = -e^2; \quad (b) \exp\left(\frac{2 + \pi i}{4}\right) = \sqrt{\frac{e}{2}}(1 + i); \quad (c) \exp(z + \pi i) = -\exp z.$$

Question 9.

Use the Cauchy-Riemann equations to show that the function

$$f(z) = \exp \bar{z}$$

is not analytic anywhere.

Question 10.

Write $|\exp(2z + i)|$ and $|\exp(iz^2)|$ in terms of x and y . Then show that

$$|\exp(2z + i) + \exp(iz^2)| \leq e^{2x} + e^{-2xy}.$$

Question 11.

Show that $|\exp(z^2)| \leq \exp(|z|^2)$.

Question 12.

Find all values of z such that

$$(a) e^z = -2; \quad (b) e^z = 1 + \sqrt{3}i; \quad (c) \exp(2z - 1) = 1.$$

Ans:

$$(a) z = \ln 2 + (2n + 1)\pi i \quad (n = 0, \pm 1, \pm 2, \dots).$$

$$(b) z = \ln 2 + \left(2n + \frac{1}{3}\right)\pi i \quad (n = 0, \pm 1, \pm 2, \dots).$$

$$(c) z = \frac{1}{2} + n\pi i \quad (n = 0, \pm 1, \pm 2, \dots).$$

Question 13. We showed in class that for the inversion mapping $f(z) = 1/z$, $z \neq 0$, the real and imaginary parts of $f(z)$ are

$$u(x, y) = \frac{x}{x^2 + y^2} \quad \text{and} \quad v(x, y) = \frac{-y}{x^2 + y^2}.$$

Show that the level curves of $u(x, y)$ are a family of circles passing through the origin with center on the real axis; while the level curves of $v(x, y)$ are a family of circles passing through the origin with center on the imaginary axis.
